

Forged here. Built to last.

Scaleforged builds AI companies in Québec around a mission of preserving jobs and giving people time.

AI venture studio

Québec, Canada

The paths illustrate knowledge flows.

More time for the people around us.

The mission is to modernize work without eliminating jobs.

Preserve jobs and
human decisions

Useful skills that grow

Time for family and
community

One cycle. Orchestrated agents.

Twelve stages. Specialized agents. People approve each next step.

01 **Voice**

Turn the spoken need into a clear brief.
Output : Intent brief
Human approval : You confirm the need and the people it should help.

04 **Design**

Sketch the workflow and its reversible choices.
Output : Workflow sketch
Human approval : You approve the workflow before construction.

07 **Test**

Test the workflow, errors and edge cases.
Output : Test evidence
Human approval : You inspect the evidence and send failures back to build.

10 **Measure**

Assess quality, time and full cost per accepted task.
Output : Evaluation summary
Human approval : You judge usefulness and choose what to improve.

02 **Plan**

Break the brief into steps and acceptance criteria.
Output : Acceptance criteria
Human approval : You set the priorities, limits and budget.

05 **Build**

Build the smallest workflow that meets the brief.
Output : First working draft
Human approval : You try the draft and point out the gaps.

08 **Review**

Have another agent examine the code and risks.
Output : Independent review notes
Human approval : You accept the review or request a correction.

11 **Listen**

Connect field feedback to the plan's acceptance criteria.
Output : Feedback priorities
Human approval : You choose which feedback should reshape the plan.

03 **Unblock**

Check for missing access, tools and information.
Output : Access checklist
Human approval : You authorize access and resolve the blockers.

06 **Iterate**

Correct a gap, then compare both versions.
Output : Revised workflow draft
Human approval : You keep the correction or request another build.

09 **Ship**

Prepare a pilot and rollback plan before release.
Output : Pilot release plan
Human approval : You authorize release to the chosen audience.

12 **Repeat**

Bring the lessons into the next spoken brief.
Output : Next cycle brief
Human approval : You start another cycle or choose to stop.

The useful result is the unit of value.

Count the full effort required for an accepted result.

Full operating cost per accepted result

Review effort and retained human control

Distinct missions. One connected ecosystem.

Each product has a role. Shared capabilities move the whole studio forward.

Nota

Transform notarial services

Bring the client's need closer to the notary's decision.

Beta

Tablix

Make document work more useful

Turn RDPRM PDFs into structured documents a professional can verify.

Beta

SST Diamantex

Connect field work to prevention

Carry a worker's observation into a reviewed action.

Beta

PlainLedger

Guide product decisions

Put each product's indicators in context for better decisions.

Beta

Ursly

Prepare the next generation

Explore more natural interaction through human senses and AI research.

Research and development

Control Craft

Target near-term revenue

Turn places, passions and memories into art.

Go-to-market proof of concept

Devanture

Build the next way to shop

Bring together storefront experience, live 3D negotiation and commercialization.

Modular platform in development

Devanture · OfferDuel · Ralika

Standalone platform / Add-on to an existing store

DealBox · Market experiment

Global knowledge. Companies created in Québec.

Global knowledge and experience inform what we build in Québec.
Our goal is to keep the IP we create here.

Research and experience from around the world

New work and practical skills rooted here

The paths illustrate knowledge flows.

Ralika, commercialization within Devanture.

A shared module to reach audiences, launch products and keep the connection.

Audience and timing	Content for the community	Review and publication	Behaviour and conversion	Measured iteration
Understand the community, its need and the moment that makes the content relevant.	Prepare suitable visuals, useful metrics or demonstrations, and adapt the format to the channel.	People check the facts, the message and the customer promise before approving publication.	Observe agreed first-party events such as product views, voluntary inquiries and purchases, with clear consent choices.	Compare variants, account for the full effort, and decide whether to continue, revise or stop.

Ralika, within Devanture, supports commercialization across the portfolio. Control Craft tests a near-term sales objective; DealBox is a nested market experiment within Devanture. These are proposed validation settings, not measured conversion results.

Revenue follows a recurring need.

The proposed studio model combines product businesses with reusable capabilities.

Subscriptions, usage or
transaction fees

Shared engineering and go-to-
market support

Each product earns its
next investment

A place in the customer's real work.

The product must earn adoption through local fit, reviewable results and useful full-cost economics.

A workflow adapted to the task

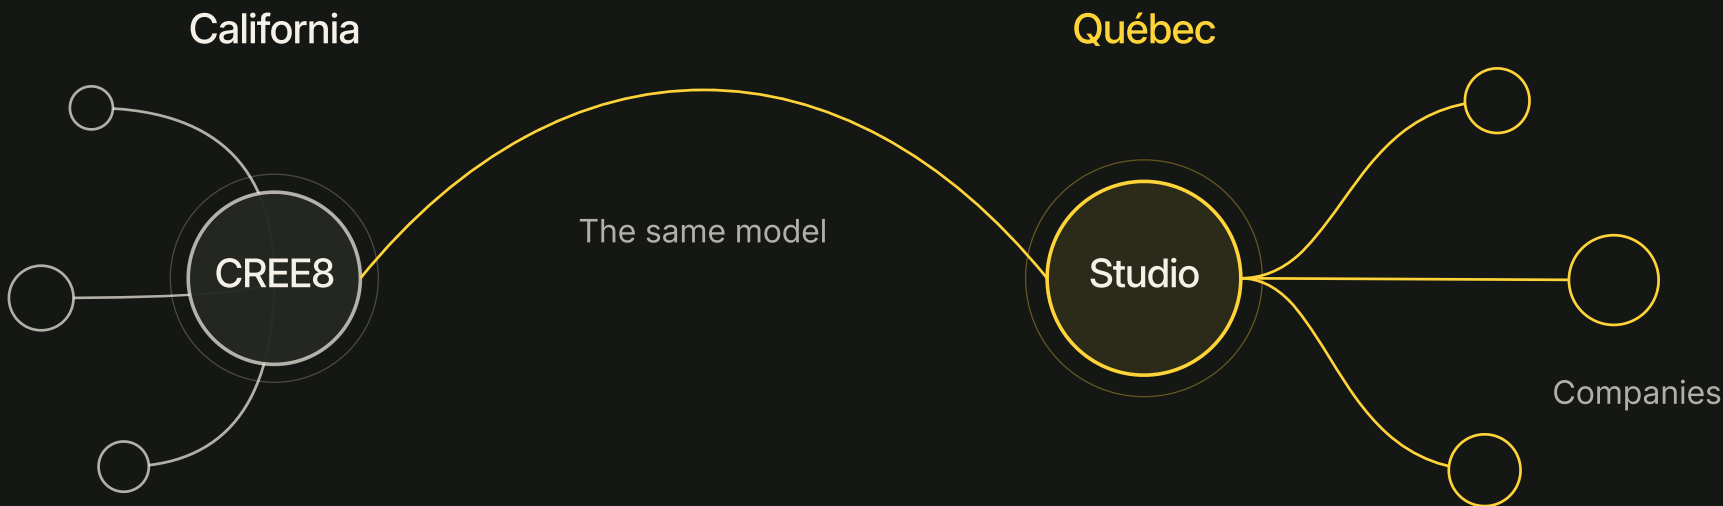

Results people can verify

Value that survives repeated use

A proven venture studio model.

Founded in California. Replicated in Québec.

One shared studio. Multiple companies.

The studio brings resources together. Companies take shape.

CREE8 · California
Anthony Paquet
Founder in California

3 years · Head of Engineering

Founder-reported background

ScaleForged · Québec

The model replicated in Québec.

The next investment follows the evidence.

Quality, human benefit, economics and paid use must all support expansion.

Source fidelity and accepted results

Human control, skills and workload

Full cost and repeated paid use

Documented rights

An 18-month plan to establish value.

Start with one accepted workflow and expand only with repeated paid use.

Months 0–3: one accepted workflow

Months 4–9: target five paid pilots

Months 10–18: target 25 paying organizations

An investment shaped together

Investment amount, structure and timing are open for discussion, based on mutual fit, investor involvement and available capital.

Shared priorities

Investor involvement

Available capital and timing

The next useful company starts with people.

Build a workflow with us that strengthens local skills and gives people more time.

A real task to improve

A team ready to shape it
